● ABOUT ME

Frontend Developer skilled in building responsive, user-focused web applications with React.js, Next.js, TypeScript, JavaScript (ES6+), and Tailwind CSS. Completed an accredited Frontend Development Diploma at Route Academy and built full projects end-to-end, from single-page interfaces to a full-stack developer community platform. Experienced with AI-assisted development and automation workflows, with a strong drive for self-learning and writing clean, maintainable code.

● EDUCATION AND TRAINING

01/08/2022 – 01/10/2026 Alexandria, Egypt
BACHELOR'S DEGREE IN SPORTS SCIENCE, ALEXANDRIA UNIVERSITY

Website <https://alexu.edu.eg/index.php/en/home1> | **Field of study** Sports Science

01/02/2025 – 18/09/2026 Alexandria
DIPLOMA IN FRONT-END DEVELOPMENT -ROUTE

Website <https://routeeg.com> | **Field of study** Web Development

18/08/2026 – 22/08/2026
CLAUDE 101 Anthropic Academy

Completed "Claude 101" — a foundational course on Anthropic's Claude AI, covering effective prompting techniques, practical use cases, and best practices for leveraging AI assistants to improve productivity and problem-solving.

Level in EQF EQF level 3

01/08/2026 – 01/09/2026 cairo, Egypt
DIGITERA PROGRAM – TECHNICAL TRACK ICAREER & PLAN INTERNATIONAL EGYP iCareer × Plan International

Certificate of Completion for the Digitera Program "Technical Track", organized by iCareer in partnership with Plan International Egypt under the Youth Inclusion and Employment Program (Ready for Tomorrow), supported by the Ministry of Foreign Affairs of Denmark, the Danish-Arab Partnership Programme and Dansk Erhverv (Danish Chamber of Commerce). The program focused on professional development, continuous learning and building new technical skills

Field of study Engineering, manufacturing and construction

● SKILLS

HTML5 | CSS3 | Bootstrap | JavaScript (ES6+) | Tailwind CSS | TypeScript | React.js | Git/Github, Docker, Gitlab | Next.js | AI-Assisted Development | End-to-End Builds | skills of prompt search for information on the Internet | GSAP (basic level) | motion.dev

● PROJECTS

01/08/2026 – 02/09/2026

RoutePosts | Social Media Web App

- Built a full social media single-page app with TypeScript, connected to a REST API. Users can sign up, log in, write posts, comment, like and see notifications.
- Added token-based login (JWT) using React Context. Protected routes send logged-out users to the login page and keep logged-in users out of the auth pages. If the token expires (a 401 response), the user is logged out automatically.
- Built full create/read/update/delete for posts (text and image uploads via FormData, with an image preview) and for comments, including an emoji picker.
- Made likes update on screen immediately (optimistic UI). If the API call fails, the like goes back to its previous state and an error message appears.
- Built a **News Feed** of people the user follows, a **Community** feed of all posts, a **Profile** page with a list of the user's posts, a **Post Details** page with its full comment thread, a **Notifications** page with an all/unread filter, and a **Settings** page for changing the password.
- Checked form input with **Zod + React Hook Form**: an age check (18+), a password-confirmation match and clear error messages for each field.
- Made the app feel faster with **skeleton loaders**, toast notifications (react-hot-toast), confirmation dialogs before deleting, and a "suggested people to follow" sidebar.
- Organised the code in layers: an API service layer, shared TypeScript types, reusable components, and separate layouts for the auth pages and the main app.
- Built a responsive design system with CSS variables and Tailwind CSS v4, and deployed the app on **Vercel**.

02/07/2026 – 08/07/2026

Wanderlust

Wanderlust — Travel Planning Dashboard | *Vanilla JavaScript (ES6 Modules), HTML5, CSS3*

- Built a single-page application with hash-based routing and dynamic view rendering, using no frameworks — pure ES6 modules with a clean separation of concerns (services, views, state, and UI layers).
- Integrated 5+ third-party REST APIs (Open-Meteo, Nager.Date, Ticketmaster, ExchangeRate API) to display real-time weather forecasts, public holidays, long weekends, local events, and currency conversion.
- Implemented client-side caching for API responses and geocoding lookups to reduce redundant network requests and improve performance.
- Developed a "My Plans" feature allowing users to save and manage favorite destinations, persisted via localStorage.
- Designed reusable UI components (toasts, loading overlays, live header clock) with responsive CSS.

25/06/2026 – 22/09/2026

LoopIn — Developer Community Platform

LoopIn — Full-Stack Social Platform for Developers & Tech Recruiters

Short version (one line):

Built a full-stack social networking platform connecting developers and tech recruiters, featuring real-time messaging, a social feed with reactions and reposts, communities, job postings, and a talent-search/recruiter dashboard — using React, TypeScript, Node.js, Express, Prisma, and PostgreSQL.

Bullet version:

- Designed and developed a full-stack social platform connecting developers, engineers, and tech recruiters.
- Built a **React + TypeScript + Tailwind CSS** front end and a **Node.js/Express + TypeScript** REST API backed by **PostgreSQL** via **Prisma ORM**.
- Implemented **real-time chat and notifications** using **Socket.IO**.
- Developed a rich social feed: posts, code snippets (Markdown + syntax highlighting), multi-type reactions, reposts/quotes, and comments.
- Added a **friends & follow** system, **communities**, **pages**, **job postings**, **talent search**, and a **recruiter dashboard with candidate shortlisting**.
- Handled **authentication & security**: JWT auth, GitHub & Google OAuth, bcrypt password hashing, rate limiting, Helmet, and Zod request validation.
- Built a responsive, dark/light-themed UI with a unified API error-handling architecture.

Tech stack: React, TypeScript, Vite, Tailwind CSS, Node.js, Express, Prisma, PostgreSQL, Socket.IO, JWT, OAuth (GitHub/Google), Zod.
